Abstract

This paper discusses the concepts of God, man, and the natural environment, as well as some of their implications for Islamic architecture. The paper is divided into eight sections, (1) Introduction: what is Islamic architecture?, (2) *Tawhid* (God's Oneness), (3) Islam and the role of man on earth, (4) Islam and the environment, (5) The importance of built environment, (6) Peaceful and sustainable coexistence between the environment, architecture and man, (7) The unique soul of Islamic architecture, and (8) Conclusion. The nature of the paper - its content, methodology, and conclusions -, is conceptual and philosophical, rather than empirical. The paper concludes that Islamic architecture is an architecture that through its multidimensionality embodies the message of Islam. It both facilitates the Muslims' realization of the Islamic purpose and its divine principles on earth and promotes a lifestyle generated by such a philosophy and principles. At the core of Islamic architecture lies function with all of its dimensions: corporeal, cerebral and spiritual. The role of the form is an important one too, but only inasmuch as it supplements and enhances function.

Keywords: Man, Islamic architecture, God, environment

Abstrak

Makalah ini mendiskusikan konsep-konsep Tuhan, manusia, dan lingkungan alam, beserta beberapa implikasinya bagi arsitektur Islam. Penulisan makalah terdiri dari delapan bagian, yaitu (1) Pendahuluan: Apakah arsitektur Islam itu?, (2) Tauhid (keesaan Allah), (3) Islam dan peran manusia di muka bumi, (4) Islam dan lingkungan alam, (5) Signifikansi lingkungan binaan; (6) Hubungan yang selaras dan berkelanjutan antara alam, arsitektur, dan manusia, dan (8) Penutup. Karakter dari makalah ini, baik isi, metodologi, maupun simpulannya, lebih bersifat konseptual dan filosofis dibandingkan empiris. Di dalam makalah ini disimpulkan bahwa arsitektur Islam adalah arsitektur yang melalui multidimensionalitasnya mengandung pesan-pesan Islam. Arsitektur Islam memfasilitasi, baik realisasi kaum Muslim akan tujuan-tujuan Islam dan prinsip-prinsip mulianya di bumi, maupun gaya hidup yang dihasilkan oleh filosofi dan prinsip-prinsip tersebut. Pada bagian inti dari arsitektur Islam terdapat fungsi (*function*) dengan seluruh dimensinya: *corporeal*, *cerebral*, dan *spiritual*. Peranan dari bentuk (*form*) juga sangat penting, namun hanya sebagai elemen pendukung dan peningkat bagi fungsi.

Kata kunci: Tuhan, manusia, lingkungan alam, arsitektur Islam

Introduction: What is Islamic Architecture?

Islamic architecture is an architecture whose functions and, to a lesser extent, form, are inspired primarily by Islam. Islamic architecture is a framework for the implementation of Islam. It facilitates, fosters and stimulates the Muslims' *'ibadah* (worship) activities, which, in turn, account for every moment of their earthly lives. Islamic architecture only can come into existence under the aegis of the Islamic perceptions of God, man, nature, life, death and the Hereafter. Thus, Islamic architecture would be the facilities and, at the same time, a physical locus of the actualization of the Islamic message. Practically, Islamic architecture represents the religion of Islam that has been translated onto reality at the hands of Muslims. It

also represents the identity of Islamic culture and civilization.

Ibn Abdun, an Andalusian judge from the 12th century, is reported to have said, as quoted by Stefano Bianca¹: "As far as architecture is concerned, it is the haven where man's spirit, soul and body find refuge and shelter." In other words, architecture is a container of people's lives.

Also, Ibn Qutayba, a Muslim scholar of the 9th century, compared the house, as quoted by Afif Bahnassi², to a shirt, saying that just as the shirt should fit its owner, the house too should suit its dwellers. That is to say, the aesthetic and utilitarian ends of the house must correspond to the needs and capabilities of its users. The two must perfectly suit each other.

Central to Islamic architecture is function with all of its dimensions: corporeal, cerebral and spiritual. The form divorced from function is inconsequential. This, however, by no means implies that the form plays no role in Islamic architecture. It does play a prominent role, but its relevance is a supportive one supplementing and enhancing function. The form is important, but in terms of value and substance it always comes second to function and its wide scope. There must be the closest relationship between the ideals that underpin the form of buildings and the ideals that underpin their function, with which the users of buildings must be at ease. A rift or a conflict between the two is bound to lead to a conflict of some far-reaching psychological proportions in buildings users. This way, the roles of form become equivalent to the roles of function.

The evolution of Islamic architecture commenced with the revelation of Islam to Muhammad (pbuh) the last Messenger of God to mankind. Although Islam is a complete code of life, it could not impose itself as such instantaneously on people doing away with their flawed living patterns, because it was revealed to Prophet Muhammad (pbuh) gradually over a span of about 23 years: thirteen in Makkah and ten in Madinah, so that the hearts of people would be able to comprehend and absorb the message of Islam. After the people had accepted Islam, making it their happy choice, it was only natural that the formation of inclusive Islamic lifestyles and cultures came about next. Then, the creation of new building styles that needed to frame, so to speak, and facilitate the new lifestyles followed, which, in turn, signified the birth of Islamic architecture. The new architecture needed some time to evolve. When it did, it typified everything that Islam stood for: its universalism, prominence, dynamism and originality. Hence, it is very much appropriate to brand such an approach to and style of building as Islamic architecture.

Tawhid (God's Oneness)

The notion of *tawhid* is the most important cornerstone in the conceptual framework for Islamic architecture. *Tawhid* means asserting the unity or oneness of Allah. *Tawhid* is the Islamic concept of monotheism. The word *tawhid* is derived from the words *wahid* and *ahad* which mean "one", "unique" and "peerless". Based on the concept of *tawhid*, Muslims believe that God cannot be held equal in any way or degree to any other being or concept. Maintaining that there is no God except Allah and that there is nothing comparable to Him constitutes the essence of *tawhid* and the essence of Islam. Thus, declaring God's oneness, *tawhid*, together with Prophet Muhammad's prophethood (*shahadah*),

is the first requirement for one who wishes to embrace the Islamic religion. *Shirk*, or associating anybody or anything with God making it comparable to Him, is the opposite of *tawhid*. It is the gravest sin which God vowed never to forgive.

Tawhid has three aspects: (1) Oneness of the Lordship of God (*Tawhid al-Rububiyah*) (2) Oneness of the Worship of God (*Tawhid al-Uluhiyyah* or *Tawhid al-'Ibadah*) (3) Oneness of the Names and Qualities of God (*Tawhid al-Asma' wa al-Sifat*).

According to these three aspects, there is only one Lord for all the universe, Who is its Creator, Organizer, Planner, Sustainer and Giver of security. He is the only Creator, the rest is His creation. He is the only Master, the rest are His servants. Nothing from His World can be a quality of the created world, and nothing from the created world can be ascribed to His World. Similarities that exist between the two realms, the divine and earthly, do not exceed the level of sheer names. Beyond that nothing is the same. There can never be an exchange in the arrangement of designations between the two dominions: that of the Creator and that of His creation.

Since the Lord and Master of the world remains as such forever, the servants too remain what they are forever. Since the Creator and Sustainer remains as such forever providing the everlasting source of all that exist, the creatures too remain forever mortal, recipients of and completely dependent on divine material and spiritual provisions. In all their undertakings, it stands to reason, people's primary mission should always be to acknowledge this undeniable truth, unselfishly exhibit its effects and try to integrate it into each and every aspect of their cultural and civilizational accomplishments. People are never to get carried away by their ostensible earthly achievements and, as a result, rebel against the established spiritual paradigms in life and then attempt to modify or manipulate them. People's earthly achievements ought always to reflect God's greatness as opposed to man's smallness, God's self-sufficiency as opposed to man's lack of it, God's infinity and permanence as opposed to man's wavering and insecurity, God's supremacy as opposed to man's fragility. Any other approach would signify a sheer falsehood, deception and fictitious optimism.

Only God deserves to be worshipped. He is the ultimate object of all the spiritual cravings and desires. No other being or idea can be elevated above its intrinsic status and be accorded some divine power or attributes. God needs no partners or associates in executing His divine tasks. He is omnipotent, omnipresent and self-sufficient. "He is the final end, that is, the end at which all finalistic nexuses aim and come to rest... He is an end for all other ends."³ God is perfect, but not in the sense of perfection as we humans are able to perceive, for

we are short of perceiving His divine perfection, but in the sense of the divine perfection as suggested again and again through His revealed words. God's divine Being cannot be represented, personified or in any way expressed by any creature.

Islam and the Role of Man on Earth

Man, according to Islam, is a vicegerent on earth entrusted with the honorable task of inhabiting it in accordance with the divine guidance given to him. This terrestrial life serves to man as a platform for either elevating his status over that of angels, should he abide by the divinely prescribed rules and regulations, or for debasing his self lower than the rank of animals, should he turn away from Truth and dazed and lost wander aimlessly amid the innumerable and awesome wonders of creation.

God created man with the primordial natural disposition (*fitrah*) to thirst for and worship his Creator. God, therefore, knowing best the character of man, his needs and weaknesses, on sending Adam and Eve to earth to assume the duty of vicegerency, revealed to them that He will never forsake them and their progeny. God promised that His guidance and signs will be coming to them, and "Whosoever follows My guidance, on them shall be no fear, nor shall they grieve."⁴ Also, "...Whosoever follows My guidance, will not lose his way, nor fall in misery."⁵

God's guidance and signs mean the religion of Islam preached by every prophet from the dawn of mankind and Adam as the first messenger to Muhammad as the last and seal of all messengers. God's divine guidance will enable man to remain strong, sensible, content and "healthy" while on earth, making him, in turn, capable of keeping up the focus of his undertakings on worshipping his Lord in every act, word and thought (*'ibadah*). God says in the Qur'an that He has created both *Jinns* and men only that they may serve Him.⁶

On the other hand, in the event of man's rejection of God's message and guidance, the repercussions will be costly. The Qur'an says: "But those who reject Faith and belie Our Signs, they shall be Companions of the Fire; they shall abide therein."⁷ Also, "But whosoever turns away from My Message, verily for him is a life narrowed down, and We shall raise him up blind on the Day of Judgment."⁸

Man is created as a social being endowed with free will, passion and emotions, which could either lead him to the highest or drug him to the lowest ebb of creation. Humanity is but a big family with the same origin, mission and purpose. People have been divided into nations and tribes only to know each other, learn from each other, and cooperate at various scales in righteousness and piety, not that they may loathe each other and conspire against

each other. They are to explore the universe and within the framework rendered by revelation try to make their existence as convenient, comfortable and meaningful as possible, hence create virtuous cultures and civilizations. However, no sooner does this universal equilibrium become impaired and vitiated than man's relationship with God, his peers and the whole of the environment starts to degenerate.

Allah says about this: "O mankind! We created you from a single (pair) of a male and a female and made you into nations and tribes, that you may know each other (not that you may despise each other). Verily the most honored of you in the sight of Allah is (he who is) the most righteous of you. And Allah has full knowledge and is well acquainted (with all things)."⁹ "And among His Signs is the creation of the heavens and the earth, and the variations in your languages and your colors: verily in that are Signs for those who know."¹⁰

Islam with its unique *tawhidic* (the unity of God) worldview champions that Muslims are brothers to each other and their similitude is like a wall whose bricks enforce and rely on each other. They are like a solid cemented structure held together in unity and strength, each part contributing strength in its own way, and the whole held together not like a mass, but like a living organism. Muslims are furthermore related to each other in such a way that if one of them (a part of an organic and formidable formation called the *Ummah*, the Community) is troubled by a problem of any kind, the rest of the body parts will remain disturbed and restless until the matter became fairly solved.

Islam and the Environment

This Islamic unique perception of man and his position on earth necessitated the formation of a compelling and comprehensive view of the natural environment as well. This is so because man totally depends on nature for his survival. Also, nature is a ground for man's realization of his spiritual purpose on earth. Simply put, man is an integral part of the total natural setting. Man is nature himself, sustaining nature means sustaining his self, damaging nature means damaging his self and his prospects of a civilizational triumph. Owing to all this, Islam attaches so much importance to the subject of environment clearly expounding man's rights over it and his responsibilities towards it.

Islam teaches that environment is part of the universal web of creation. Its role is two-fold: to worship its Creator (in ways suitable to it), and to be subjected to serve the exigencies of man, so that God's vicegerent can smoothly and undeterred carry out his honorable task of managing earth.

Environment holds enormous potential and diversified resources meant only for the vicegerent of earth. They are to be seen as facilities which if rightly used facilitate each and every facet of man's fleeting stay on earth. Environment is further to be seen by man as an "ally" or a "partner", so to speak, in the execution of his earthly mission. After all, in order to create any piece of his built environment, which serves as a framework for his activities, man borrows diverse natural ingredients, such as space, water, clay, timber, stone and other substances, placing the newly created or built elements back into the existing natural contexts. In reality, built environment is in so many ways the natural environment which has been processed and manipulated.

According to a number of divine instructions, natural diversity and the forces of nature are to be the focus of man's exhaustive scientific and contemplative attention. Diversity in humans: skin colors, languages, attitudes and cultures, are to preoccupy the cognitive faculties of men as well, thus trying to find a link between it and the former. In all natural phenomena a great deal of wisdom lies and waits to be unearthed.

In Islam, man's rights over environment are rights of sustainable use based on moderation, balance and conservation. The rights of environment over man, on the other hand, are that it be safe from every misuse, mistreatment and destruction. Greed, extravagance and waste are considered a tyranny against nature and a transgression of those rights.¹¹

Islam teaches that all things have been created with purpose and in proportion and measure, both qualitatively and quantitatively. Nature's resources and forces are gifts granted by God to man. At the same time, however, the natural environment is a field for man's vicegerency mission. It is right there, while interacting with different aspects of environment, that people clearly demonstrate how strong, or how deficient, their relationship with God is. So significant is man's relationship with environment in Islam that in some instances such relationship is able to take precedence over other deeds of man, placing him then on the highest or dragging him to the lowest level.

Furthermore, environment stands for a source of man's spiritual enlightenment too, provided his treatment of it is apt and derived from divine teachings, in that environment in its totality is an expression of God's presence, oneness, mercy and supremacy. By the power of reason and insight that has been accorded to him to subdue the forces of nature, man at the same time will be able to penetrate through and grasp properly nature's countless mysteries and phenomena. Consequently, this will lead to a considerable enhancement of his

physical well-being, as well as to expediting the process of his spiritual advancement.

Finally, environment, in a sense, participates in revealing Truth to man. It is in fact a revelation itself. Therefore, in addition to having the composed or written Qur'an (*al-Qur'an al-tadwini*) there is a cosmic or ontological "Qur'an" (*al-Qur'an al-takwini*) as well. Both revelations complement each other, as it were, in furnishing man with the necessary substance so as not to let him betray the trust of productively inhabiting the earth which he had wittingly accepted. It follows that those who fully submit to Divine Will and read, understand and apply the written Qur'an, they easily see upon the face of every creature "letters" and "words", or messages, from the "pages" of the cosmic Qur'an. For this reason are the phenomena of nature referred to in the Qur'an as signs or symbols (*ayat*), a term that is also used for the verses of the Qur'an.¹²

The following are some verses from the Qur'an on the discussed aspects of environment:

"Do not you see that to Allah prostrate all things that are in the heavens and on earth, - the sun, the moon, the stars, the hills, the trees, the animals, and a great number among mankind? But a great number are (also) such as unto whom the chastisement is justly due. And such as Allah shall disgrace, - none can raise to honor: for Allah carries out all that He wills."¹³

"See you the seed that you sow in the ground? Is it you that cause it to grow, or are We the Cause? Were it Our Will, We could make it broken orts. And you would be left in wonderment... See you the water which you drink? Do you bring it down (in rain) from the cloud or do We? Were it Our Will, We could make it saltish (and unpalatable): then why do you not give thanks?"¹⁴

"O you people! Worship your Guardian Lord, Who created you and those who came before you that you may become righteous; Who has made the earth your couch, and the heavens your canopy; and sent down rain from the heavens; and brought forth therewith fruits for your sustenance; then set not up rivals unto Allah when you know (the truth)."¹⁵

"And He has subjected to you, as from Him, all that is in the heavens and on earth: behold, in that are Signs indeed for those who reflect."¹⁶

The Importance of Built Environment

The implications of the concepts of God, man as the vicegerent (*khalifah*) and his interaction with nature for architecture are both ideological and practical. To begin with, humans are not the only creatures that build. Many a creature that we classify low down the hierarchy of the animal kingdom, such as bees and ants, build elaborate

structures. However, it has been suggested that it is awareness and imagination that single out humans as superior to other animals in architectural output.¹⁷ While the rest of creation act on environment instinctively with no reasoning or training, man does the same willingly and at his own discretion. Since his actions are preceded with thinking and rationalizing, man clearly demonstrates through acts of building - and through every other engagement of his - his philosophy of, and outlook on, life's realities.

Based on his free will, awareness and imagination, man builds edifices in various shapes and sizes and with various function patterns in order to facilitate, nurture and motivate his copious life activities. In fact, such is of the fundamental things that distinguish man from other animate creatures that share this earth with him. The existence of man cannot be imagined without the existence of a built environment. The relationship between the two is causal, man always being the cause and built environment the effect. Therefore, no phase of man's presence on earth could be imagined to be devoid of building activities, irrespective of their scale, simplicity and sophistication.

This principle applies to all including the very first man and prophet on earth, Adam, who is said to have built the first House of worship, i.e., the *al-Masjid al-Haram* or *Baytullah* (the House of God). Exactly forty years following the completion of the *al-Masjid al-Haram*, either Adam himself or some of his descendants were instructed to proceed to a designated location (later Jerusalem or *Bayt al-Maqdis*) and build there the *al-Masjid al-Aqsa*, the second mosque on earth.¹⁸

Ibn Khaldun¹⁹ rightly observed that building is a basis of civilization, and is of the most indispensable crafts which man ought to gain knowledge of: "This (architecture) is the first and oldest craft of sedentary civilization. It is the knowledge of how to go about using houses and mansions for cover and shelter. This is because man has the natural disposition to reflect upon the outcome of things. Thus, it is unavoidable that he must reflect upon how to avert the harm arising from heat and cold by using houses which have walls and roofs to intervene between him and those things on all sides. This natural disposition to think, which is the real meaning of humanity, exists among (men) in different degrees..."

Le Corbusier²⁰ also remarked: "Architecture is one of the most urgent needs of man, for the house has always been the indispensable and first tool that he has forged for himself. Man's stock of tools marks out the stages of civilization, the stone age, the bronze age, the iron age. Tools are the result of successive improvement; the effort of all generations is embodied in them. The tool is the direct and

immediate expression of progress; it gives man essential assistance and essential freedom also..."

Sinan²¹, the chief architect of the Ottoman golden age, said: "It is obvious and proven to men of intelligence and wisdom and persons of understanding and vision that building with water and clay being an auspicious art, the Children of Adam felt an aversion to mountains and caves and from the beginning were inclined to cities and villages. And because human beings are by nature civilized, they invented day-by-day many types of buildings, and refinement increased."

While erecting buildings for himself, God's vicegerent on earth in fact creates a wide range of facilities which are aimed at smoothing the progress of the realization of his heavenly purpose on earth. Buildings are thus subjected to serve together with their occupants an elevated order of things and meanings. They are to be both the means and ground for worship, which is man's principal task. Though serving him and his wants, God's vicegerent on earth always sees his buildings in an additional light, not seen by those who are bogged down with and blinded by fervently pursuing some lowly material gains. He sees them as an extension of the existing universal setting, God's physical realm, where all components, irrespective of their sizes, functions or positions, incessantly worship God. Buildings are thus seen as serving God rather than man. Their services to man even though genuine and real are rather relative. Because the whole universe constitutes a mosque (*masjid*) with everything in it, save a group of men and *Jinns*, voluntarily singing in unison God's praises and celebrating His glory with neither fatigue nor boredom ever befalling them, Islamic architecture aspires to add to this exhilarating set-up. It aspires to endorse the divine spiritual standards and expands them to the spheres of human influences, thus making them more easily approachable and perceptible by more people with different interests and aptitudes. Hence, Islamic architecture apart from facilitating man's vicegerency mission also promotes as well as spawns people's interest in it.

When Mawlay Idris decided to build the city of *Fas* (Fez) in northern Africa (Morocco), having sketched the ground-plan of the city and before construction got underway, he recited the following prayer: "O my Lord! You know that I do not intend by building this city to gain pride or to show off; nor do I intend hypocrisy, or reputation, or arrogance. But I want You to be worshipped in it, Your laws, limits and the principles of Your Qur'an and the guidance of Your Prophet to be upheld in it, as long as this world exists. Almighty, help its dwellers to do righteousness and guide them to fulfill that. Almighty, prevent them from the evil of their enemies, bestow Your bounties upon them and

protect them from the sword of evil. You are able to do all things.”²²

Peaceful and Sustainable Coexistence between the Environment, Architecture, and Man

The Islamic notions of God and His Oneness (*tawhid*), man as the vicegerent on earth and the natural environment as the field of man's vicegerency mission, give Islamic architecture its conspicuous identity. It also creates in Muslims an unprecedented spirituality-loaded outlook on building activities so that the highest level of compatibility between buildings and their users exists. Islamic spirituality ensures that Islamic architecture and Muslims forge a productive, peaceful and sustainable alliance. They all originated from the same source and serve the same ontological purpose. The character of Islamic architecture is such that it tries its best to disguise its mundane naturalistic factors and features that may hinder a beholder's focus pointing in turn to a higher order of expression and meaning. The beholder's attention is directed towards the desired end by various ingenious artistic and structural ways and methods which are meant to yield an intuition of the real essence of the Transcendent and its divine infinity and perfection.

Since God is the Creator and Lord of everything, including man, He too is the actual Owner of everything. To God belongs everything in the universe. As far as man is concerned, though being elevated to the degree of God's vicegerent on earth and to whom all things have been subjected, he still possesses nothing. Everything around him has been loaned to him so that he in a responsible and unhindered manner can carry out his duties of vicegerency - no more than that. Even his very self, i.e., his life, man does not own. It belongs to his Creator, and if needed he is to sacrifice it for Him and His cause.

No sooner does man come into this world than he sets out to display his inherent readiness to take from this world: to breath, to wear apparel, to drink, albeit without possessing anything, save his very self, to give away in return. Man is therefore born as an insolvent consumer. Not only does he own nothing, but he also remains forever short of enjoying a power of bringing into being anything without making use of the available raw materials and elements created for him in nature. Creating *ex nihilo* (from absolute nothingness), as a sign of genuine richness, sovereignty and might, is the right and power of God alone. Indeed, everything that man invents, conceives, concocts and creates is possible only thanks to the unbounded bounties and munificence from God which man only discovers, manages, processes, uses and reuses in different

ways most convenient and efficient for him. The upshots of man's myriad civilizational pursuits on earth are never really his own possession and, as such, by no means could be solely utilized for returning the debt of creation and existence to God. Hence, being prudent, modest and grateful when dealing with God's gifts that grace existence, as well as when dealing with one's own accomplishments, are some of the virtues most appreciated, and the opposite is some of the vices most detested, in man. As far as the built environment is concerned, this translates as sustainability and sustainable development. God is thus to be acknowledged all the time and in every interest of man as the final end, as the ultimate object of all desire, as the ultimate source of all goodness, of all value. It is God Who makes every other good; He is the highest good for the sake of Whom every good thing is good.²³

God says on this in the Qur'an: "They say: "Allah has begotten a son". Glory be to Him. Nay, to Him belongs all that is in the heavens and on earth: everything renders worship to Him. To Him is due the primal origin of the heavens and the earth. When He decrees a matter, He says to it: "Be," and it is."²⁴

"Do you not know that Allah's is the kingdom of the heavens and the earth, and that besides Allah you have no guardian or helper?"²⁵

"A revelation from Him Who created the earth and the high heavens. The Beneficent Allah is firm in power. His is what is in the heavens and what is in the earth and what is between them two and what is beneath the ground."²⁶

God explicitly says that he is the Creator and thus the Owner of everything including people and whatever they are able to make. People's creations and possessions are in fact God's: "And Allah has created you and what you make."²⁷

This philosophy is strikingly clear also in the field of architecture. Whenever an architect embarks on designing an edifice, he carves out the space needed for his project. The Muslim architect, worthy of his profession, will approach space with reverence, not arrogance, as it is God's physical realm. According to al-Faruqi (1981), "if it (space) must be cut for man to have a dwelling, such would have to be done in humility and with ease, harboring no might, no self-assertion and no defiance." The Muslim architect, therefore, will always strive to exhibit through his creativity and skills that the buildings designed by him interact with space, flow into and become part of general space, instead of separating itself from it. Buildings remain connected with outside space by the open inner court and windows. Toward the same end, the edge of an Islamic building is often crenellated, the skyline sometimes multiplied, and the vertical edges recessed or protruded with broken surfaces designed to lessen the impact of the cut-off in space.²⁸

When creating an edifice, the Muslim architect and structural engineer charged with the vicegerency spirit are first and foremost concerned about how the end result of their efforts will stand out when juxtaposed with the existing universal setting, a result of heavenly artistry, in terms of both function and outward appearance: will it complement or contrast with it; will it go well with it, or will it appear as if something of a misfit, oddity, or even offensiveness; will it be sustainable?

Function

Concerning function, the Muslim architect always exerts himself to ensure that a new structure serves a noble purpose, regardless of whether it is a mosque, school, dwelling, caravanserai, hospital, fountain, mausoleum, etc., whereby God alone is meant to be worshipped and adored. In this way, every new structure even though man-made yet it signifies, as it were, a conformation and even enhancement of the aura generated by the character and role of the natural world. Instead of standing alone amidst the marvels of God's creation, quite alien to them, a structure rather integrates itself with them as much as its plan, design and utility are able to suggest, identifying its status *vis-à-vis* the otherworldliness with that of the natural sensations around it.

Building materials and substances used in building processes are normally taken or "borrowed" from nature. The same materials heretofore belonged to the flawlessly executed universal web singing God's praises and celebrating His glory. Although they have been removed from their original contexts, the building materials from nature are still utilized for some other perfectly fitting goals related to man, thereby causing their intrinsic "holy pursuit" to remain unaffected or perturbed. As a result of the Muslim's restricted and controlled intervention in nature, only did the original condition and context of natural building materials and substances change, which is nevertheless expected, needed and in full accordance with God's universal will and plan. The inherent functions of those building materials and substances remain the same.

Before they are used in buildings, building materials from nature worship God in unison with the rest of nature's components. It is thus only fair that they are used in those buildings where God is worshipped as well, so that their unremitting acts are still performed in peace and without interruption. It sounds strange but it would be an act of injustice towards nature if some of its ingredients were used for erecting buildings wherein the authority of God will be disrespected and His words contravened. Besides, such a deed would also denote that a contribution toward upsetting the fine equilibrium in nature has been made. When the

Prophet (pbuh) declared that "there is neither harming nor reciprocating of harm", he had in mind not only human beings but also the natural world with all its components. And surely, it is a form and degree of harm when the spiritual paradigms of nature are perturbed, just as it is harmful to abuse the physical aspects on nature's kingdom. The mentioned words of the Prophet (pbuh) implied, furthermore, that our built environments must be sustainable, that is, that they do not generate any harm to either people or their natural surroundings. A built environment is to be an asset, not a liability, to all of its users.

Surely, it stands to reason that as man is very much capable of perturbing the physical laws of nature by his actions, so is he in a position to get in the way of the covert aspects of nature's existence, as much as God allows it. Therefore, while creating buildings, that is to say, while creating frameworks and fields for their activities, God's vicegerents wish not to contravene any of the universe's spiritual laws and patterns. On the contrary, they wish to enhance them forever remaining on friendly terms with them. Certainly, a building can be either a "friend" or an "antagonist" to its animate and inanimate neighbors.

Indeed, as the vicegerent on earth endowed with free will, man while interacting with his surroundings, taking and giving, is in a position both to sustain and damage the existing natural equilibrium. It is up to what choice and life orientation and purpose man chooses. This is applicable not only to the physical aspects of the natural world, but also to the metaphysical or spiritual paradigms of whole existence. That is to say, Islam does not speak only about physical sustainability on earth, but also about a spiritual one throughout the realms of the vast universe, which God's vicegerents on earth must be fully aware of and must readily aim for. Such, it could be inferred, is the supreme goal of man's divine mission. Such, furthermore, is a clear measure of man's success or failure in his vicegerency undertaking.

Finally, Islamic buildings, as the Qur'an confirms, are erected and sustained upon a foundation of piety to God and His good pleasure, because the lives of their benefactors too are built on piety and hopes for God's pleasure. Whereas the buildings of those who turn away from God are erected upon a foundation of suspicion, faithlessness and false hopes and fears, just as their lives are built upon the like foundation. While the lives and buildings of believers, in spiritual terms, are strong and firm for the obvious reasons, the lives and buildings of nonbelievers, for obvious reasons too, are weak, insecure and shaky. God then asks: "Is he who founded his building upon duty to Allah and His good pleasure better; or he who founded his building on the brink of a crumbling, overhanging precipice

so that it toppled with him into the fire of hell? Allah guides not wrongdoing folk. The building which they built will never cease to be a misgiving in their hearts unless their hearts be torn to pieces. Allah is Knower, Wise.”²⁹

Form

As regards the form of erected structures, the Muslim architect, powered with the spirit of *tawhid* and a desire to fulfill the will of a higher order or cause, always tries his best to make his edifices come into sight adhering to the existing spiritual paradigms of the natural environment. Nature is the perceptible sign of the Creator’s will and presence, which is as evident in the most trivial as in the most splendid. Thus, every new component of built environment ought to become, in a way, a “sign” itself, lest they become irreconcilable with both nature and the spiritual and psychological disposition of their users. Islamic architecture is to be seen as a man-made “sign” amid the signs of God in nature.

Humans must live on friendly terms with nature, as much as such an arrangement is possible, beneficial and needed. Under no circumstances can man in any endeavor of his declare a war on the natural environment, because, on account of many a physical, mental and emotional weakness of his and his actual total dependence on environment, man and nobody else is bound to emerge at all times as a dire loser. The natural environment is simultaneously an obstruction and help, and architects seek both to invite its aid and to drive back its attacks. If rightly conceived and seriously pondered, the placement and form of edifices in relation to their sites with arrangement of their axes and spaces may well be turned into a device for controlling natural light, ventilation, heating, cooling, insulation, acoustics, etc. The same philosophy is to be attached - perhaps in a more forceful and compelling mode - to the spiritual dimension of the relationship between the built and natural environment, as it concerns one’s well-being in both this world and in the Hereafter. Because it goes along with the objectives of the Islamic *Sharī’ah* (Law), peaceful and harmonious coexistence with nature, in the spiritual sense of the term, was, furthermore, at the core of the Muslim’s religious existence.

In view of the fact that Islamic architecture bears a strong spiritual impression and is one of the means for espousing the cause of Islam, it did not really always matter in the history of Islamic civilization who were the builders, planners and developers of many a project. What actually mattered was whether the ultimate roles and utility of such projects were justifying the time, effort and capital spent on them, as well as what their impact was on the existing state of the community and on its future progress. Although architecture as a

profession was extremely important and honored, architects, most of the time, have not been excessively venerated, neither by their patrons nor by the public. It was for this that on most of Islamic buildings no names of their builders were inscribed. If there was anything imprinted on them, then it was the date of their commencement or completion, or the name of the ruler or the patron. Except in cases of insincere undertakings, never were the architects, planners or developers concerned about promoting their name or status, about their position in history, about what some shortsighted people would say about their work, about how some members of the ruling elite would react during and after construction, and so forth.

This indicates that buildings in Islam are erected to serve together with their occupants the only Creator and Lord of the universe. As a result, buildings in Islamic architecture are heavily transfigured aiming to negate their mundane worldly ingredients and stand out as the man-made “signs” of God’s oneness and greatness. Also, Muslim architects and structural engineers turned down a prospect of drawing attention to themselves, their careers and their works of art. They feared that such an act would somewhat impinge on and, in the worst scenario, debilitate the promotion of the idea of total spirituality underlining the total identity of Islamic architecture. Nothing was to stand between God and a building’s users and observers. Through the planning and organization of spaces in buildings, through the handling of buildings’ forms, through the methods and styles of ornamentation and beautification in buildings, and through the envisioned functions of buildings - through all these channels and means Muslim architects and structural engineers go all-out to put on view the signs of the Creator’s presence, infinite authority and greatness, on the one hand, and to display the signs of men’s fragility, dependence and smallness, on the other. This way, every building in Islamic architecture is transformed into a kind of a house of God, *baytullah*, so to speak, thus translating onto reality the implications of the Prophet’s tradition (*hadith*) that the earth has been made as pure and a place of worship (*masjid*) to the Prophet (pbuh) and his followers.³⁰

The Unique Soul of Islamic Architecture

Islamic architecture exists because of the existence of Islam. Moreover, in many ways it serves the noble goals of Islam. Islamic architecture serves Muslims too, in that it aids them to carry out successfully their vicegerency (*khilafah*) mission on earth. Islamic architecture aims to help rather than obstruct Muslims in fulfilling that which they have been created for. Islamic architecture is Islam

manifested. Islamic architecture, Islam and Muslims are inseparable.

Islamic architecture originated with the advent of Islam on the world scene. It never existed before, even though the peoples that became instrumental in molding and perpetuating its conspicuous identity lived where they were for centuries before embracing Islam and possessed the cultures and civilizations of their own. Indeed, studying Islamic architecture by no means can be separated from the total framework of Islam: its genesis, history, ethos, worldview, doctrines, laws and practices. Any approach by anybody and at any point of time to disconnect Islamic architecture from that which held sway over its conception and formation would result in failure and, worse yet, may lead to a distortion of the real picture of the entire subject matter and with it the picture of Islam.

While exemplifying Islamic beliefs and teachings through the hierarchy of its diverse roles and functions, Islamic architecture evolved a unique soul. Such a soul is best recognized and appreciated only by those whose own lives are inspired and guided by the same sources as is Islamic architecture. Furthermore, it stands to reason that if one wanted to genuinely understand and value Islamic architecture, one, first and foremost, must possess an intimate knowledge of Islam whose precepts and values it exemplifies. Next, one should disengage himself for a moment and as much as he could from whatever he has formerly perused or has been told about Islamic architecture, exerting himself an effort to experience it in its totality and as if he is one of its users. One is to try hard via one's hands-on experiences if one wanted to feel the spiritual and sensory aura that Islamic architecture exudes within its realm. Not to one or a few of its aspects, and not to a single and static moment of time, should one's comprehension and appreciation of Islamic architecture be restricted. Rather, one's thoughts and interest are to encompass all its aspects and dimensions, honoring in the process its remarkable spiritedness and dynamism which were conditioned by neither the time nor space factors. Finally, whatever one's approach in studying Islamic architecture might be, one should never try to extricate it from the contexts which governed its commencement, rise, dominance and survival. Islamic architecture ought to be viewed as a revolutionary world phenomenon as universal, omnipresent, perpetual and revealing as the standards and values that gave rise to it. It was as responsive to the climatic, geographical and cultural requirements as any other architectural tradition, nevertheless, it never treated them apart from the exigencies of a higher order. By means of skills, creativity and imagination, on the one hand, and by its distinctive combination of aesthetic and

utilitarian ends, on the other, Islamic architecture never, even by a whisker, separated man's physical, psychological and spiritual needs, treating then some sets of needs at the expense of the others.

Due to all this, Alfred Frazer, as reported by M. A.J. Beg³¹, said about the fundamental nature of Islamic architecture: "The architecture of Islam is the expression of a religion and its view of the world rather than that of a particular people or political or economic system."

In the same vein, Titus Burckhardt³² also wrote that it is not surprising, nor strange, that the most outward manifestation of Islam as a religion and civilization reflects in its own fashion what is most inward in it. The same author further remarked: "If one were to reply to the question 'what is Islam?' by simply pointing to one of the masterpieces of Islamic art such as, for example, the Mosque of Cordova, or that of Ibn Tulun in Cairo, or one of the *madrasahs* in Samarqand....that reply, summary as it is, would be nonetheless valid, for the art of Islam expresses what its name indicates, and it does so without ambiguity."

It would also be appropriate to quote Le Corbusier³³ who was very eloquent about the extent architecture can hold sway over our senses, experiences and thoughts: "The Architect, by his arrangement of forms, realizes an order which is a pure creation of his spirit; by forms and shapes he affects our senses to an acute degree and provokes plastic emotions; by the relationships which he creates he wakes profound echoes in us, he gives us the measure of an order which we feel to be in accordance with that of our world, he determines the various movements of our heart and of our understanding; it is then that we experience the sense of beauty."

Although Le Corbusier meant no particular style or school of architectural thought, it is clear he meant that every architectural representation is pervaded with an ideology which through its physical expressions connects with the users and greatly influences their feelings. It is thus expected that there always exists an intimate relationship between people and their architecture. Consequently, it is said and rightly so, as reported by John S. Reynolds³⁴, that "when people lose their emotional connection to the buildings they occupy, all architecture ends".

Islamic architecture means a process that starts from making an intention, continues with the planning, designing and building stages and ends with achieving the net results and how people make use of and benefit from them. Islamic architecture is a fine blend of all these stages which are interlaced with the tread of the same Islamic worldview and Islamic value system. It is almost impossible to single out a tier in the process and regard it more

important than the rest. It is because of this conspicuous spiritual character of Islamic architecture, coupled with its both educational and societal roles, that the scholars of Islam never shied away from keenly addressing a number of issues pertaining to various dimensions of residential, mosque and communal architecture within the scope of Islamic jurisprudence (*fiqh islami*). The relevant issues are discussed under different headings such as: legal rulings in connection with neighbours and neighbourhoods (*ahkam al-jiwar*), reconciliation (*al-sulh*) between immediate neighbours and all the people in a neighbourhood, people's individual and collective rights, prohibition of inflicting harm (*darar*), legal rulings pertaining to building (*ahkam al-bina'*), and public services and facilities (*al-marafiq*). All these issues undoubtedly play a significant role in shaping the identity of Islamic architecture. They are either directly or indirectly related to conceiving, designing, forming and using Islamic architecture. Since architecture is people's art greatly influencing their moods and the day-to-day life engagements, the same issues concerning architecture are studied as part of exhaustive encyclopaedic works on Islamic jurisprudence (*fiqh islami*).

The referred to encyclopaedic works on Islamic jurisprudence (*fiqh islami*) discuss virtually everything that Muslims might do, including matters about building, thus giving them a clear life orientation and guidance. This way a powerful message is given, that is, neither from the Islamic spirituality nor from the people's actual life challenges and problems can Islamic architecture be separated one side existing in a world and the other side existing in another completely different world. What's more, Islamic architecture is to be alive, real and dynamic playing an active role in overcoming the people's challenges and solving their problems. Architecture is not to be for society's elite only serving a limited spectrum of interests. It must belong to all the strata of society attending to their vast and diverse interests and needs. Architects and structural engineers, it goes without saying, are the humble servants of society. They must be completely and exclusively answerable to their people. The people, in turn, are to function as the best judges on whether their architecture is good or bad, effective and conducive to their life activities or not, functional and friendly or otherwise. And architects must listen if they were to hang on to their professional credibility and social standing. Doing otherwise will be tantamount to betraying the profession of architecture as well as people's trust placed on architects. It follows that a very close and responsible relationship is to exist between architects and the people due to the close relationship between them. This entitles people to play an active and participative, rather than a

passive or indifferent or acquiescent, role when it comes to their architecture for they are its immediate customers and clients.

Islamic architecture accepts no rigidity, formalism and literal symbolism, especially in relation to its structural domains. If the religion of Islam presents Muslims with a conceptual framework for architecture, which encompasses the Islamic worldview and Islamic fundamental teachings and principles, such in no way implies that the creativity and design freedom of Muslims are thus killed off, at worst, or stifled, at best. On the contrary, they are very much stirred and encouraged to thrive through the same means, with the only difference that certain divine precepts now preside over their development and use lest some people's imagination and enthusiasm, at some point, become disoriented and misleading, hence perilous to man's well-being.

What makes an architecture Islamic are some invisible aspects of buildings, which may or may not completely translate themselves onto the physical plane of built environment. The substance of Islamic architecture is always the same, due to the permanence of the philosophy and cosmic values that gave rise to it. What changes are the ways and means with which people internalize and put into operation such philosophy and values to their own natural and man-generated circumstances. Such changes or developments could simply be regarded as most practical "solutions" to the challenges people face. For example, the mosques that Prophet Muhammad (pbuh) built carried the same meaning and essence as the mosques that were built in history and that we build today, despite the major differences in form. The spirit of the housing schemes that Prophet Muhammad (pbuh) carried out was likewise the spirit of any other Islamic housing scheme that was implemented at any point of history and in any part of the world, despite their vast differences in terms of sophistication and building technology and engineering. The same can be said about any other aspect of Islamic built environment.

Stefano Bianca³⁵ remarked on the extent to which the Islamic spirituality influences Islamic architecture: "Compared with other religious traditions, the distinctive feature of Islam is that it has given birth to a comprehensive and integrated cultural system by totally embedding the religious practice in the daily life of the individual and the society. While Islam did not prescribe formal architectural concepts, it molded the whole way of life by providing a matrix of behavioral archetypes which, by necessity, generated correlated physical patterns. Therefore, the religious and social universe of Islam must be addressed before engaging in the analysis of architectural structures."

Islamic architecture thus promotes unity in diversity, that is, the unity of message and purpose,

and the diversity of styles, methods and solutions. Certainly, this renders Islamic architecture so relevant and dynamic, and so consistent and adaptable. It is such a fascinating subject to study, for doing so is not about sheer art and architecture. It is more than that: it is about beholding the Islamic ideology and creed at work. It is about witnessing a microcosm of Islamic society, civilization and culture. Islamic architecture is about Islam taking up a manifest form.

The identity and vocabulary of Islamic architecture evolved as a means for the fulfilment of the concerns of Muslim societies. Islamic architecture was never an end in itself. It was the container of Islamic culture and civilization reflecting the cultural identity and the level of the creative and aesthetic consciousness of Muslims. Architecture, in general, should always be in service to people. It is never to be the other way round, that is to say that architecture should evolve into a hobby or an adventure in the process imposing itself on society while forsaking, or taking lightly, people's identities, cultures and the demands of their daily struggles. Architecture, first and foremost, should remain associated with functionality. It should not deviate from its authentic character and stray into the world of excessive invention and abstraction.

Conclusion

Islam is a complete way of life. Its values and teachings, together with the teachings of Prophet Muhammad (pbuh), whose primary task was to explain to mankind and put into practice the precepts of Islam, are universal and timeless. The significance of Islamic architecture is universal and permanent too, in that the philosophy that it embodies is the Islamic one. However, such is the nature of Islamic architecture that it is receptive to both advances in science and technology and the dictates of people's living conditions. When we talk about the need for restoring the role and status of Islamic architecture in the world today, we must pay attention to the causes that will invariably lead us to the desired effects. One of the most important causes, certainly, will be our proper understanding of Islam: its teachings, history and civilization, coupled with the Islamization of ourselves and our societies.

Central to the understanding of the identity of Islamic architecture, as both a concept and sensory reality, is the understanding of the Islamic concepts of God, man and the natural environment. This is so because it is man -- a creature entrusted with an honorable mission by God -- who perceives, creates and uses architecture. It is man who produces or destroys architecture. It is man who enjoys or suffers from architecture. Furthermore, architecture and

the natural environment are inseparable, at both the conceptual and practical planes. The environment holds enormous potential and diversified resources meant only for man, God's vicegerent on earth. They are to be seen as the facilities which facilitate each and every aspect of man's fleeting stay on earth. The environment is further to be seen by man as an "ally" or a "partner", so to speak, in the execution of his earthly mission. After all, in order to create any piece of built environment, man borrows diverse natural ingredients, such as space, water, clay, timber, stone and other minerals, placing the newly created or built element back into the existing natural contexts. Actually, built environment is in many ways the natural environment which has been processed, used and reused, manipulated, and the like. Man himself constitutes a part of the universal natural setting. It follows that some of the most prominent features of Islamic architecture are: it is heavily loaded with the Islamic spirituality; it is users friendly; it is environment friendly; and, it is sustainable.
